

Conrad Anderson

Oyster Internet Mobile Satellite Broadband Internet

Now available with up to
10 Mbps connection speed!

**Conrad Anderson
is the UK Distributor
of Oyster Internet.**

Oyster®

**Oyster Internet
Broadband Internet and TV.
Including LNB and Modem.
Maximum 10 Mbps Download Speed.**

Mobile Satellite Broadband Internet Highlights:

- Automatic search with one-click deployment.
- Now available with up to 10 Mbps connection speed.
- Will provide broadband internet access anywhere in Central & Northern Europe.
- Receive TV and Internet simultaneously (with offset arm adaptation).
- No degradation of signal due to geographical location (barring obstruction of satellite).
- Fixed-dish solution available.

Connectivity without limits!

The Oyster internet offers broadband connectivity throughout Europe. Whether you are working, holidaying or relaxing we can enable you to stay connected regardless of location and at no extra cost.

Oyster's reputation for high quality in the mobile satellite market, coupled with Conrad Anderson's knowledge, expertise and customer service is a great combination for your satellite internet needs.

The Oyster Internet is now available with a 4Mbps connection speed, making it a viable option for even the most data heavy applications.

***FreeZone** - For an additional fee, FreeZone gives you unlimited data between 11pm and 5am every night. Anything you do during this time doesn't come out of your allowance. It is particularly useful for scheduling and making large downloads or uploads.

TopUps put you in control of your speed and data. When you're in the follow-on zone and you want to boost your speed, just buy a 1GB TopUp and go back to the top speedstep of your package.

Fair Use Policy

As with all Internet Services, there are download and speed limits. This protects the user experience of most ordinary users from congestion caused by very heavy users dominating the bandwidth. The limits are more strictly applied during congestion & peak hours to share the overall bandwidth more fairly.

Peak Hours are usually 5pm - 10pm weekdays and 10am - 10pm weekends. Heavy internet congestion (e.g. due to large software updates) can also cause congestion and slower overall speeds.
